Abstract

China is in the historical convergence period of the great changes unseen in the world in a century and the overall situation of the great rejuvenation of the Chinese nation. Good development of China's economic situation, in a new revolution of science and technology to catch up, international influence increasingly brought unprecedented opportunities to China, so the us-led western countries at the same time, in order to restrain the development of China, launched "color revolution", the ideological infiltration, smear China, this is some similar to outbreaks and other uncertain factors, It has brought great challenges to China's development. In such a complex international situation and complex international relations, how to seize opportunities and meet challenges is the right place at the right time to achieve the second Centenary Goal.

Keywords

Great Changes Unseen in a Century; Opportunities; Challenges.

1. Foreword

In one hundred from the upheaval of the embodied in the "no", the first China development speed has never been so soon as it is today, China's economic development has been good, today's China is the world's second largest economy, manufacturing the first big country, the first big trade in goods, the consumption of the second largest country in the second largest country, foreign capital inflows, for many years China's foreign exchange reserves in the world. This time, China has given priority to breaking out of the encircling situation and taking the lead in resuming work and production. Some scholars claim that China will overtake the United States and become the world's largest economy in the middle of this century. Second, China is catching up in the new round of scientific and technological revolution. In the fourth revolution represented by artificial intelligence, China occupies a place in core technologies such as the Internet of Things and the Internet, which is unprecedented in a century. Third contact more closely in China and the world, China is gradually into the center of the world stage, China has always been committed to global governance, in terms of public health, China actively aid to other countries during the outbreak, in the fight against terrorism, in aspects and so on global climate governance has made outstanding performance, fully embodies the image and the power of the bill.

2. Opportunities for China

2.1. Historical Opportunities from the Institutional Perspective

The first aspect of the opportunity facing China in the context of unprecedented changes is its institutional advantage. The contest between great powers is fundamentally a contest of systems. Deep in xi general secretary came to power, pointed out that China's political system is enduring, no matter how long after all can't change, but he also further explains, "the political system is used to adjust political relations, the establishment of political order and promote the development of country, maintain national stability", and "in a country's institutions, The

political system is in the key link ", which not only restores the basic principle of historical materialism, but also reveals the law of institutional change in Chinese history. The new outbreak, more highlights the unique advantages of the socialist system with Chinese characteristics, China, in the shortest time to realize new confirmed cases of zero growth, on the contrary, the disadvantages of American capitalism appeared increasingly, liberalism will outbreak in the United States to the climax, the spread of epidemic all embody the U.S. policy mistakes, in order to escape responsibility, deliberately to discredit the Chinese in the United States, Us politicians have repeatedly made false statements about "the epidemic in China" and "covering up the epidemic", and called China's help to other countries during the epidemic "epidemic diplomacy". The reason behind this is that the United States openly challenged the Chinese system. Therefore, at the historical juncture of the "two centenary journeys" and the turbulent period of the world pattern and order, Only by adhering to the socialist system with Chinese characteristics and upholding confidence in the system can China achieve the two centenary Goals.

2.2. Historical Opportunities from the Perspective of Executive Power

The second aspect of China's implementation is deeply rooted in China's democratic centralism, which is the embodiment of the superiority of democratic centralism. Democratic centralism is the fundamental system of organization and leadership of the communist party of China, guaranteed the party and the organ concentrate resources to accomplish large undertakings and coordinate the work of colleges and universities, to the outbreak, it fully embodies the advantages of democratic centralism, the Spring Festival in 2020, was originally a peaceful year of boxer, a outbreak, make the people of the whole country into a panic, at this time, Peak during the Spring Festival, if not controlled flow of people, the virus will human-to-human transmission, consequences, xi general secretary of the Standing Committee of the Political Bureau of the CPC Central Committee meeting, the first time emphasized that "life is heavier than mount tai", in any case have to put the life safety and body health of the people first, the central committee of the communist party of China through the three aspects of deployment, The first is to set up a top leading body for the epidemic. The second is to send expert teams to all regions. The third is to call on all local Party organizations to strengthen their political awareness and sense of responsibility. The leadership and deployment of COVID-19 prevention and control has fully demonstrated that "the Party is the highest force for political leadership, and its leadership is the most essential feature of socialism with Chinese characteristics, and the greatest strength of the system.

2.3. Historical Opportunities from the Perspective of International Influence

Have advocate since ancient times, China in recent years, through promoting "area" in China, to build their own diplomatic mode, put forward by the Chinese community of human destiny also are included in the UNESCO official text for many times, the outbreak period, China's holding my hand to many countries, which reflects the image of power, China has won respect and trust from other countries for its joint response to the epidemic. For a long time, China has actively participating in global governance, advocate green management idea, the China contribution for the world economy out of its own strength, actively maintain world peace, China in the world within the scope of the power and growing influence, in the world within the scope of the voice more and more strong, just as the xi when speak with UN secretary-general guterres said: "The outbreak of COVID-19 once again shows that mankind is a community with a shared future. In an era of economic globalization, such a major emergency will not be the last, and various traditional and non-traditional security issues will bring new tests. The international community must foster a sense of community with a shared future for mankind, help each other, and work together to meet risks and challenges and build a better planet." China's development

and construction has provided the world with a "China model". China's more inclusive and inclusive diplomatic model has brought more opportunities for China's development.

2.4. Historical Opportunities in Terms of Scientific and Technological Innovation

Scientific and technological innovation is an important factor to measure the comprehensive national strength of a country. The new round of scientific and technological revolution represented by artificial intelligence has arrived, and whoever stands at the commanding heights of scientific and technological innovation will be on the stage of a major country. The new round of scientific and technological revolution will reconstruct the international structure and have a strong impact on the world order. China attaches great importance to scientific and technological innovation. In May 2018, General Secretary Xi Jinping pointed out at the 19th Conference of Academicians of the Chinese Academy of Sciences and the 14th Conference of Academicians of the Chinese Academy of Engineering that "to become strong and prosperous, and to achieve rejuvenation, China must vigorously develop science and technology and strive to become a major science center and innovation highland." At the same time China has issued a "made in China 2025" "a new generation of artificial intelligence development plan" and so on, China has firmly seize the new round of revolution of science and technology, China is leading 5 g communication technology, through the analysis in the United States to weaken our policy in recent years, enough to see at the fast development of science and technology innovation in China, in February 2019, In a joint press conference with Hungarian Foreign Minister Sjardo, US Secretary of State Mike Pompeo said that Hungary's deployment of Chinese Huawei equipment would cause difficulties in bilateral cooperation. In addition, the US ambassador to the EU also publicly said that any country that allows the use of Equipment from Chinese companies will face US sanctions and retaliation. No matter what kind of oppression the United States may impose on us, China will unswervingly carry out scientific and technological revolution, seize the period of strategic opportunity and realize the rise of a great power.

2.5. Historical Opportunities from the Perspective of Economic Development

Today, China is the world's second largest economy, the largest manufacturer, the largest trader in goods, the second largest consumer of goods, and the second largest inflow of foreign capital. China's foreign exchange reserves have been the largest in the world for many years. This time, China has given priority to breaking through the siege and resumed work and production first.

3. Challenges Facing China

3.1. Unilateralism is Rife

After the economic crisis in 2008, the ECONOMY of the United States began to decline. Although the economy of the United States eased in the two terms of Obama's re-election, it was difficult to return to the development trend of the American economy before 2008. Meanwhile, The economic development trend of China kept soaring. Militarily, have an aircraft carrier, nuclear submarines and other powerful weapons and equipment, from less than one over ten of America's military spending to close to a quarter of the United States, at the same time, China has also made substantial development in science and technology, space lab, satellite and other major scientific and technological achievements appeared in recent years, world GDP in 2019 ranked the second place, The overall decline of the US economy, and the overall rise of China's economy, is the fundamental reason for the US to suppress China. In order to get rid of the economic crisis, the United States shifted the economic crisis to other countries, causing worldwide dissatisfaction. Especially after Trump came to power, he adopted a tough and brutal means to comprehensively suppress China. First, the US is waging a trade war with China.

Trump believes that China is the biggest source of the US's biggest trade deficit, and the long-standing trade deficit has harmed the "fair trade principle". The second is to call China a revisionist state and the third is to see China as a strategic rival of the United States. Trump's series of policy changes toward China have brought sino-US relations to a freezing point. Both former President Donald Trump, who advocated "America First", and new President Joe Biden, who advocated "Renewed American leadership", regard China as a stumbling block for the United States to dominate the world. After taking office, Biden made clear his attitude towards China by declaring that the Diaoyu Islands are subject to Article 5 of the US-Japan Security Treaty. Therefore, the complex relationship between China and the United States will always be accompanied by China's development. Whether to go with the trend or against the trend is a big test left to us by The Times.

3.2. Ideological Infiltration

The infiltration of ideology is another major challenge hindering China's development. The infiltration of ideology by Western countries represented by the United States usually persecutes China's rule and thus harms China's economic development. The recent "anti-amendment" demonstration in Hong Kong was single-handedly manipulated by western countries represented by the United States. Nancy Pelosi, the Speaker of the U.S. House of Representatives, publicly called the Hong Kong incident "a beautiful scene" in China, and they used money, study abroad and other conditions as bait to induce some young people in Hong Kong to engage in the so-called "color revolution" in China. In addition, western countries also persecute China's sovereignty through the form of geopolitical war, mainly in encouraging unrest in Xinjiang, Tibet and other places. In addition to external factors, the main reason is that the will of some classes is not firm. In the future, how to prevent the infiltration of western countries' consciousness and how to increase the sense of national identity is an important challenge to safeguard China's autonomy and one country, two systems. Due to the outbreak, the world environment has become more complex, and China is faced with increasing uncertainties. Emergencies such as the epidemic will continue to occur. Therefore, how to prevent and defuse major risks is another challenge of the profound changes unseen in a century.
